

# Kvinder i Fysik Invites

## From Physics to Fashion

### Job as a Data Scientist

Data science is an umbrella of several techniques that are used for extracting the information and the insights of data, both structured and unstructured. It includes everything that is associated with the cleaning, preparation and final analysis of data and combines programming, logical reasoning, mathematics and statistics. A perfect match for a science graduate!

Data science is everywhere and in E-commerce is a race to the top of providing the best and most intelligent services for customers. See how it is done using machine learning techniques and data insights, and learn what it takes to be a data scientist!

**Where:** Department of Mathematics

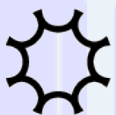

Ny Munkegade 118, Building 1534, Aud.-F.

**When:** 19 of April, 3 pm.

**Everyone is welcome to join! :-)**

Our speaker, **Nanna Bill Andersen**, graduated from Aarhus University in April 2016 with a Master's in Astronomy.

Since November 2016 she has been employed as a Data Scientist at Boozt Fashion, a multi-brand online fashion store and one of the largest fashion E-commerce players in the Nordic region.
