

Scientific Social Responsibility

The development towards knowledge societies calls for a renewed discussion of the social responsibility of research institutions and actors. This conference aims to set the scene for a wider debate on the role of 'Scientific Social Responsibility'.

Core issues on the conference agenda include:

How can actors of academia be socially accountable and responsible towards a greater good?

What are the social responsibilities of science in relation to business and innovation?

Can representatives of the social sciences and humanities be active in enlarging the ethical, economic and social capacity of the emergent knowledge societies?

How can Scientific Social Responsibility be understood and operationalized to add value to institutional policy statements, research management guidelines as well as in everyday scientific practice?

Programme

Track I - MICRO: SSR and the daily scientific practice

Track II - MESO: SSR and the impact on research management

Track III - MACRO: SSR, policy formulation and the national regulation of science

The full programme is available [here](#)

Co-organisers
